Binary perceptions identified in the literature

Typology of attitudes towards ocean energy projects

*Cronin 2021
Bas 2017*

- *Fight against climate changes*
 - *Technical innovation*
 - *Biodiversity benefits*
- *Socio-economical benefits*

- *Personal interests*
- *Scepticism about efficiency*
 - *Biology conservation*
- *Scepticism about socio-economical benefits*

- **General objectives**

- Identify best practices for local community engagement in the ocean energy sector
- Make recommendations to anticipate potential conflicts and propose compromise solutions
- Produce a ‘best practice’ guide on local communities engagement relative to ocean renewable energies.

➤ Realization of surveys and interviews destined to ocean energy projects partners who experienced local communities engagement actions in Europe

1 State of the art of regulatory, institutional and political frameworks in the EU

2 Online survey

Type of results

- The regulatory framework of « engagement » in Europe
- what are the legal requirements for engaging with local communities?
 - Are developers 'simply' complying with legal obligations, or are they doing more?

3 Interviews

Type of results

1. Presentation of local communities engagement processes
2. Evaluation of the impacts of the engagement measures
3. Listing good practices for engage with local communities

ECHANTILLON

représentés

19 projects

All types of projects represented

Project type	N	%	Technology
Commercial project	1	6	wave
Device demonstrator	15	75	11 wave, 4 tidal
Pilot farm	3	19	2 wave, 1 tidal

1 Typology of engagement in ocean energy projects

The participation scale

1 Typology of engagement in ocean energy projects

The participation scale

Consultation

- The communities receive **information**
- The communities **express their opinions**

Information

- The communities receive **information**
- They **do not participate** to decision making

1 Typology of engagement in ocean energy projects

The participation scale

Conciliation

- The key stakeholders and/or citizen are **consulted**
- Négociations are undertaken to **compensate** the impacts

Consultation

- The communities receive **information**
- The communities **express their opinions**

Information

- The communities receive **information**
- They **do not participate** to decision making

1 Typology of engagement in ocean energy projects

The participation scale

Partnership

- The key stakeholders and/or citizen **participate** to decision making (ex: location, technical characteristics)
- Négociations are undertaken to **avoid, reduce, compensate** the impacts

Conciliation

- The key stakeholders and/or citizen are **consulted**
- Négociations are undertaken to **compensate** the impacts

Consultation

- The communities receive **information**
- The communities **express their opinions**

Information

- The communities receive **information**
- They **do not participate** to decision making

1 Typology of engagement in ocean energy projects

The participation scale

Delegation →

- Some responsibilities are **delegated** to communities (organization of consultations, project management, communication ...)
- The community take the decisions about the project, **the project is initiated by the community**

Partnership →

- The key stakeholders and/or citizen **participate** to decision making (ex: location, technical characteristics)
- Négociations are undertaken to **avoid, reduce, compensate** the impacts

Conciliation →

- The key stakeholders and/or citizen are **consulted**
- Négociations are undertaken to **compensate** the impacts

Consultation →

- The communities receive **information**
- The communities **express their opinions**

Information →

- The communities receive **information**
- They **do not participate** to decision making

2 Comparison of engagement process

Comparaison des formes d'engagement pratiquées avec le cadre légal

Country	Level of participation (legal)	Level of participation observed in the case study
France	Consultation	1 project: consultation (early stage of development of the project) 4 projects: partnership
Ireland	Consultation	1 project: Partnership 1 project: Delegation
Netherlands	Consultation	1 project: Consultation 1 project: Partnership
Portugal	Consultation	2 projects: Partnership 1 project: Delegation
Scotland	Information	Partnership (for all studied projects)
Spain	Consultation	Consultation (for all studied projects)

Map stakeholders carefully and identify local issues

- Ensure that all stakeholder groups are included
- Identify community development issues and potential environmental and societal impacts
- Involve experts

Map stakeholders carefully and identify local issues

- Ensure that all stakeholder groups are included
- Identify community development issues and potential environmental and societal impacts
- Involve experts

Engage early and regularly

- Engage with stakeholders as early as possible and throughout the project
- Provide even a small amount of information on a regular basis, rather than a large amount of information at the beginning and ending of the project

Map stakeholders carefully and identify local issues

- Ensure that all stakeholder groups are included
- Identify community development issues and potential environmental and societal impacts
- Involve experts

Share information transparently

- Share information through many different media
- Educate the public on the technology
- Present tangible examples of environmental and socio-economic benefits
- Be adaptive, transparent, honest and consistent in your communication
- Anticipate fake news by acknowledging potential scientific uncertainties

Engage early and regularly

- Engage with stakeholders as early as possible and throughout the project
- Provide even a small amount of information on a regular basis, rather than a large amount of information at the beginning and ending of the project

Map stakeholders carefully and identify local issues

- Ensure that all stakeholder groups are included
- Identify community development issues and potential environmental and societal impacts
- Involve experts

Engage early and regularly

- Engage with stakeholders as early as possible and throughout the project
- Provide even a small amount of information on a regular basis, rather than a large amount of information at the beginning and ending of the project

Share information transparently

- Share information through many different media
- Educate the public on the technology
- Present tangible examples of environmental and socio-economic benefits
- Be adaptive, transparent, honest and consistent in your communication
- Anticipate fake news by acknowledging potential scientific uncertainties

Meet in person with locals and key stakeholders

- Organise public meetings and specific meetings with key stakeholders
- Consult with the community and include them in decision-making as much as possible
- A mediator within the community and medias should relay factual and verified information
- A steering committee is an efficient place to discuss issues and bottlenecks related to the project

KEY POINTS

- Prioritize stakeholder expectations and needs on regulatory and institutional frameworks
- Define developer practices for engaging with local communities
- Discuss these practices with the regulatory and institutional frameworks
- Highlight some alternative forms of engagement that could help improve engagement practices with local communities

KEY POINTS

- Prioritize stakeholder expectations and needs on regulatory and institutional frameworks
- Define developer practices for engaging with local communities
- Discuss these practices with the regulatory and institutional frameworks
- Highlight some alternative forms of engagement that could help improve engagement practices with local communities

CONCLUSION

Ostrom, 2010

- The challenges of social acceptability lie in structuring collective action between developers and local communities.
- Developers innovate and implement measures to engage with local communities in response to regulation that is not always appropriate

KEY POINTS

- Prioritize stakeholder expectations and needs on regulatory and institutional frameworks
- Define developer practices for engaging with local communities
- Discuss these practices with the regulatory and institutional frameworks
- Highlight some alternative forms of engagement that could help improve engagement practices with local communities

CONCLUSION

Ostrom, 2010

- The challenges of social acceptability lie in structuring collective action between developers and local communities.
- Developers innovate and implement measures to engage with local communities in response to regulation that is not always appropriate

PERSPECTIVES

- We propose this guide to sustainably integrate the good practices for local communities engagement to develop win-win strategies
- *How can the sustainable inclusion of these practices could transform stakeholders' perceptions and help ocean energy project development?*

Thank you for your attention !

Best practices guide – build trust, accelerate permitting & reduce costs

Local Community Engagement: Ocean Energy Best Practices

STEP 1

Map stakeholders thoroughly and identify local issues

STEP 2

Engage early and regularly

STEP 3

Share information transparently

STEP 4

Meet in person with locals and key stakeholders
